Explanatory Notes

1. New or Recent Changes in Presentation

(a) Arising from War Conditions

Estimates of total populations are not available for Regions or Local Government divisions of the country (see Section 2 below).

Tables U and V are omitted owing to the suspension of the revision of Electoral Registers.

Certain regional analyses of the fertility data (Tables FF, LL, NN, TT and UU) have been suspended.

(b) Population Statistics Act 1938

The fertility analyses in Tables AA-YY are based on information obtained under the Population Statistics Act 1938 which operated from the 1st July, 1938.

2. Populations

The 1940 estimate of the total population of England and Wales shown in Table A includes members of its Armed Forces and Merchant Marine at home and overseas; it excludes the Armed Forces of Dominions, Colonies and Foreign countries temporarily present in the country. For years prior to 1940 the figures exclude Armed Forces and Merchant Seamen absent from the country approximating to 180 thousands in recent years. The national total cannot be apportioned amongst areas within the country.

The national and local estimates of civilian resident populations (Table E) are derived from the National Register enumeration of 29th September, 1939 after allowance for subsequent births, civilian deaths, migration and net intakes into the Armed Forces obtained from the National Register and other sources of information.

3. Births

The births recorded in Table B are the numbers registered in years prior to 1939 and the numbers of occurrences from 1939 inclusive. The 54,144 live births and 382 still births which occurred in 1938 but were registered in 1939 (*see* Table YY of 1939 Statistical Review Part II) are excluded from the serial Tables B-D.

Classification of occurrences by local areas is not available for 1939 or 1940 and the numbers shown in Table E are the numbers registered—as in previous years. In normal peace years the average time lag between occurrence and registration was formerly maintained at the fairly constant period of about a month and while there was little change in the birth rates, the numbers registered corresponded approximately to the number of occurrences. Since the outbreak of war and the introduction of food rationing the lag has progressively diminished with the result that the live birth registrations in recent periods have been in excess of the occurrences so that birth rates and infant mortality rates (*see* Section 7) will tend to be overstated or understated respectively when based upon registrations. The ratio of occurrences to registrations in 1940 was 0.9721 in respect of live births and 1.0021 in the case of still births for the country as a whole.

In the classification of births by area in Table E, the births have been assigned to the home address or area of permanent residence in all cases as in previous years. For the calculation of infant and maternal mortality a slightly different assignment was used following that adopted for the classification of the deaths (*See* (6) below).

4. (a) Birth Rates

The national rates for 1940 shown in Tables C and D are obtained by relating birth occurrences to the total population, while the rates in Table E are based on birth registrations and civilian populations (see Sections 2 and 3 above). For the country as a whole the ratio of estimated civilian population to total population is 0.9529 and this when combined with the correction in (3) above yields a factor of 0.9263 by which the live birth rates of Table E may be multiplied to produce rates approximately comparable with those of preceding years.

(b) Fertility Analyses

The fertility and infertility tables AA to XX, with the exception of Table EE, are based upon the births and deaths registered in 1940. The national specific fertility rates of Table EE, however, have been specially compiled on the basis of the births which occurred in the year and the number of births and the fertility rates there shown are supplemented with similar information specially compiled in respect of the birth occurrences of 1939.

5. Marriage Rates

The national marriage rates of Tables C and D are based upon total populations while those of Table F are based upon civilian populations (see Section 2 above). For the country as a whole the ratio of estimated civilian population to total population is 0.9529 and the rates of Table F may be multiplied by this factor to produce rates approximately comparable with those of preceding years.

6. Deaths

The deaths recorded in Table E are those registered in the period, the time lag between occurrence and registration being usually only a day or two. The said deaths are those of civilians only and are classified according to the area of residence of the deceased, the following conventions being adopted in the special circumstances (evacuation, industry transfers, etc.) of the war period, viz. (a) where a temporary address was recorded as well as a former permanent address the death was assigned to the area of the temporary address and (b) where the death occurred in a non-evacuation area (otherwise than in an institution) and only one address was recorded which was in an evacuation area the death was assigned to the non-evacuation area.

Civilian War Deaths identified in Table E (col. 13) are mainly those registered under the special emergency procedure applicable to deaths due to war operations.

7. Death Rates

The general death rates of Table E are civilian rates based upon civilian deaths and civilian populations. The Infant Mortality rates of Table E, conforming to the practice followed in previous years, are based upon the births registered in the period to which the deaths relate. Rates measured in this way however are imperfect in that no allowance is made for the circumstances (a) that the births registered may be different from the numbers occurring in any period (See 3 above) or (b) that infant deaths relate partly to births which occurred prior to the death registration period. To convert the national rate based on coterminous birth registrations to a corrected rate based upon related births, the former should be multiplied by 1.017 and the same factor may be used to provide approximately corrected rates for areas of the country.

8. Changes in Boundaries

Areas in respect of which boundaries have not remained constant throughout the year are distinguished in Table E by printing symbols, *denoting alteration, † new creation and § abolition. (See also Appendix A.)

Unless otherwise indicated, statistics of areas created or abolished refer only to the portion of the year of their existence, while statistics of areas whose boundaries have been altered are composite figures combining the "before change" and "after change" position for the respective periods involved. The population of each area as constituted after change will be found in Appendix A, the population shown in Column 2 of Table E being a constructed figure appropriate for use with the partial or mixed records of births and deaths of the current year.

9. Significance Indication

Rates based upon less than 20 births or deaths are distinguished by italic type as a warning to the user that the smallness of the experience may affect its significance.

10. Regions

The constitution of the Regional Divisions of England and Wales used throughout the volume is as follows:—

<p><i>Greater London.</i> The area coincident with the City of London and Metropolitan Police Districts — approximately 15 miles' radius from Charing Cross.</p> <p><i>South East.</i> Bedfordshire. TABLE AA. Maternities and Births of all Types, distinguishing legitimacy and, in the case of births, sex and whether live or still-born. } **England and Wales 1940 Registrations.**

NOTE: The term "Maternity" is used to denote a pregnancy which has terminated in the birth of one or more live or still-born child(ren), the criterion of still birth being that defined in the Births and Deaths Registration Act, 1926. The maternity record differs from the Birth record in that multiple births from a single pregnancy are counted as one maternity while for the birth record each child born is reckoned as a separate unit.

Table OO. Legitimate Maternities distinguishing the Interval since Marriage.*

England and Wales 1940 Registrations.

*Note:—Interval since marriage. As the month only and not the day of the mother's marriage is obtained at a birth registration, the interval between marriage and birth of child has been calculated on the assumption that both events take place at the middle of month; and the true interval may accordingly be a month greater or less than the calculated interval. A group of intervals expressed in the table as "x—" consists of calculated intervals from x to one month less than the next expressed interval inclusive and the possible range of the true intervals included therein is greater than this range by one month at each end (e.g., the group 1—has a possible range from 11 months to 1 day less than 2 years and so on). The groups thus overlap to this extent though the records are not duplicated thereby.

TABLE SS. Legitimate Maternities distinguishing Interval since Marriage and Total previous children (surviving, dead or stillborn) by Present Husband.

Note: Statements of numbers of children which were incompatible with the interval since marriage were not questioned, and are recorded without modification. Such children, if incorrectly stated, were presumably illegitimate or offspring of a previous marriage. See also note to Table OO.

Table VV. Infertility of Deceased Married Women distinguishing certain Causes of Death. { England and Wales 1940 Registrations.

Note :—The columns distinguish the deaths according to whether the deceased was reported

(a) as having had no children by any husband. i.e., Infertile.

(b) as having had children by a husband. i.e., Fertile.

Deaths in which the record of fertility was not reported are excluded from the table.

In view of the unreliability of inferences based upon small numbers, proportions based on less than 50 cases (Infertile plus Fertile) have been omitted and proportions based on between 50 and 250 cases are shown in italics.
